DETAILED ACTION

This Office Action is responsive to the Remarks filed on February 27, 2007. A new rejection is presented for the following reasons of record.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Uchida et al., JP 2003-217642.

Uchida et al., teach comprising a process for generating power comprising: a first step of generating power from a fuel cell comprising a fuel electrode, an air electrode and an electrolyte membrane sandwiched therebetween (0004) wherein the fuel electrode is made of an alloy comprising platinum (0004) and a fuel is a liquid comprising a secondary alcohol (0004), by directly feeding the fuel to the fuel electrode (0004); a second step of contacting the air electrode in the fuel cell with an oxidizable material and applying a current form an external electric source between the fuel cell electrode and the air electrode (0035-0036); and a third step of generating power from the fuel cell after the second step (0030). The process as claimed in Claim 1, wherein

Art Unit: 1745

the fuel electrode is made of an alloy of platinum and at least one metal selected from the group consisting of ruthenium (0015). The process as claimed in Claim 1, wherein the fuel electrode is made of an alloy of platinum and at least one metal selected from the group consisting of ruthenium (0015). The process as claimed in Claim 1, wherein the fuel electrode is made of an alloy comprising platinum and ruthenium (0015). The process as claimed in Claim 1, wherein an atomic composition ratio of platinum to the other elements in the alloy is 65:35 to 10/90 (0015). The process as claimed in Claim 1, wherein the oxidizable material is water or hydrogen (0030).

Thus, the claims are anticipated.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Angela J. Martin whose telephone number is 571-272-1288. The examiner can normally be reached on Monday-Friday from 9:00 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick Ryan can be reached on 571-272-1292. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
